## Product Version

**LW-VEN Version:** 1.1.10

### Standard versus LTS Releases

For information about Standard versus Long Term Support (LTS) releases, see [Versions and Compatibility](#) in the Illumio Support portal (log in required).

Illumio Core release numbering uses the following format: “a.b.c-d+e”.

- “a.b”: Standard or LTS release number, for example, “2.2”
- “.c”: Maintenance release number, for example, “.1”
- “-d”: Optional descriptor for pre-release versions, for example, “preview2”

## About This Document

These release notes describe the new features, enhancements, resolved issues, and known issues for the Legacy Windows Virtual Enforcement Node (LW-VEN) 1.1.10 release.

The LW-VEN is a custom version of the standard Illumio VEN. Like standard VENs, the LW-VEN is a lightweight multi-process application with a minimal footprint that runs on a workload. The LW-VEN programs the native OS firewall that enforces the policy controls you've defined for your legacy Windows machines.

See the LW-VEN Installation and Configuration Guide for information.

## Resolved Issues in 1.1.10 LW-VEN

- **ICMP rule generation created empty command** (E-120840)

When the LW-VEN generated a rule to add/modify/delete an ICMP rule, it also generated an empty command which caused the LW-VEN to fail when it tried to apply policy to that empty command. This issue is fixed.

- **Excessive time needed for Windows firewall to apply Illumio rules** (E-120184)

Policy application failed when the Windows firewall took longer than expected to apply PCE-generated rules. This issue is fixed. Policy is now applied in the background. Note that applying firewall commands on a low-powered server can take longer than expected.

- **Policy conflict lead to policy sync failure and LW-VEN crash** (E-120119)

A conflict occurred when merging the default Illumio policy with the customer's Illumio-generated policy. This caused an Illumio policy sync failure and crashed the LW-VEN service. This issue is fixed.
